GENERAL OFFICES:

6201 Thirty-Fourth Avenue South,
Minneapolis, Minnesota 55450

W E L C O M E

Friday evening, June 12th, 1964, we invite YOU and your family to attend our first FAMILY NIGHT at our main base facilities here in Minneapolis.

The purpose of this particular evening is to give YOU the opportunity to show your family where you work and visit the other sections and departments. Those who work in Building #6 will be able to see what goes on in Treasury's IBM section. Those who work in Revenue Accounting may see what goes on in Overhaul!

Although the FAMILY NIGHT is sponsored by the Maintenance and Engineering Department, ALL Departments of the Company are sharing in the program. Static displays will be on view as well as a number of operating displays. As North Central Airlines is a 24-hour a day, 7-day a week operation, some sections will be in actual operation.

YOU will be the guide for your family throughout the facilities. Personnel will be available in most sections to answer your specific questions. The building and area maps in this program will assist in directing you to areas of interest.

At 8:45 PM we ask that you come with your family to the hangar bay in Building #2 where a short program will be held. WCCO's Sherm Booen will act as Master of Ceremonies. Sherm has always been considered part of North Central's family. As you know, he directs the World of Aviation program each week on WCCO and is

recognized as an aviation authority in the Twin Cities and Minnesota.

The program will feature the talents of local North Central employees. There will be a number of door prizes contributed by the Company, as well as some of our leading vendors.

All we need is YOU and your family to make the evening a success. Refreshments will be available at key locations for your enjoyment. Entertainment for youngsters too young to tour with you will be provided.

So, we'll see YOU Friday, June 12th.

Hours are 7 PM to 10 PM

And don't forget! Complete the Door Prize TAG included with this program! Be sure and bring it with YOU and deposit it at the Reception Area on your arrival!

(Because of smoking regulations, we must insist that there be no smoking except in approved areas.)

MAIN BASE HIGHLIGHTS FOR YOUR FAMILY TOUR

At our expanded facilities in Minneapolis, many employees are not familiar with other sections or departments. We are taking this opportunity to offer you a brief description of the work accomplished in some of the areas you will visit.

Starting from Building #2 reception area, go up the main stairway and turn to the right. Go to the north end of the building. Beyond the glass doors is the Revenue Accounting section - the place where incoming monies are handled, primarily ticket revenues. It also includes the office which processes Air Freight revenues.

Moving back down the hall, you can view the IBM Center where an interesting program will be offered for your observation. Most important to employees is printing of their payroll checks! This area is a major assist to all departments and will prove to be more so each year as we phase additional jobs through the computer. This is a most interesting spot!

Continuing beyond the main stairway, we come to another division of Treasury, the General Accounting offices. This section handles all accounts payable from our suppliers who sell goods and services.

Continuing to the east end of the second floor, you'll be welcomed to Flight Control and the adjacent System Communications Center. Both areas are "on duty" 24-hours a day, seven days a week. Watch the weather bureau printer beat out a sequence! See weather maps being reproduced directly from Washington! Flight Superintendents in Flight Control will explain the routine of handling a flight.

Taking the stairway to the first floor, we suggest going across the hangar bay to the north to the Automotive Shop which maintains our ground equipment such as tugs, trucks, baggage carts. From there, go west through the Stock Room. This is one of three Minneapolis Stock Rooms.

On the west side of the building are the Electrical and Radio Shops of the Electronics Section. In the Electrical Shop you can get an idea of the multitude of electrical components we use in our aircraft! And the Aircraft Radio Shop is something in itself. Don't fail to see the Radar test rig on the north side of the shop, as well as the new Distance Measuring Equipment (DME) test rig. And we aren't finished yet. Take a look at the Ground Radio Shop which services all the system ground radio stations.

Back across the hangar bay along the west wall is the entrance to the Print Shop. This shop is indicative of our printing needs - two presses, folders, cutters, dark room for plate work. If you have a printing job, these fellows stand ready to assist in any way they can!

This brings you back to the main Reception Area. From here, proceed down the hall to the east, through Flight Operations office area to the hangar bay of Building #3.

This is the Line Maintenance work area where check and maintenance work is performed on Convairs and DC-3's. The dock in the southwest corner is used for the Convairs and the northwest corner for DC-3's. This area is a virtual beehive of activity from 11 PM to 6:30 AM when the overnight aircraft are prepared for originating schedules in the morning.

If you look at the stand near the Convair dock you will see how a line check is performed. A card system is utilized. The checks of the inspectors and the sign-off of the mechanics must balance so that there is no possibility of a check being missed.

If you like, take the stairway in the northwest corner to the second floor and see the Ground Operations Department offices on the north side and the Traffic and Sales Department on the south side. This is the area where we began our remodeling of the Minneapolis facilities in the winter of 1961-62. We're mighty proud of the job we did to make these places functional and livable. Take the stairway down on the southwest corner to the street level.

Now hop a bus to Building #6. This is where newly acquired aircraft are prepared for North Central service. Line Maintenance in Building #3 does considerable removal and replacing of parts, and Building #6 is where Overhaul puts new life into removed units for further service.

On the second floor of Building #6 are the offices of the Maintenance and Engineering Department, to the right of the stairs. The Maintenance Records section and the Conference Room are to the left. A "Staff Meeting" is held daily to discuss the current maintenance problems in order to improve operational performance. On the balcony outside the second floor is located our Production Planning where they can oversee the major projects going on.

On the hangar floor are the Sheet Metal, Fabric and Trim, Welding, Engine Build-Up, Hydraulics, and Accessories Shops, just about everything pertaining to aircraft overhaul.

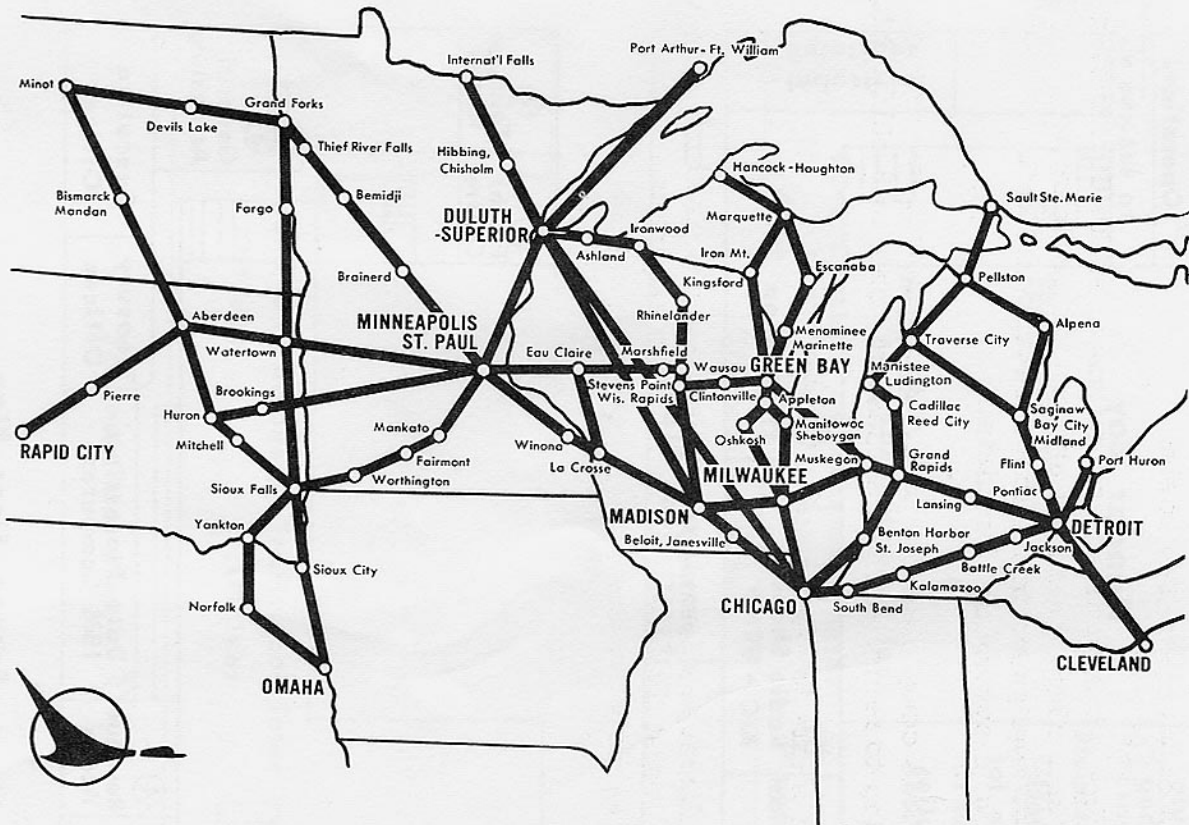

The Stock Room is in the north half of the building. This is the main system Stock Room. You'll see that it takes lots of parts and equipment to keep our fleet flying on a day-to-day basis!

The last stop is across the street at the Engineering Building. Here, plans for any project pertinent to aircraft equipment or buildings throughout North Central's system are formulated.

This completes your tour. Your bus will be waiting to return you to the assembly area in Building #2.

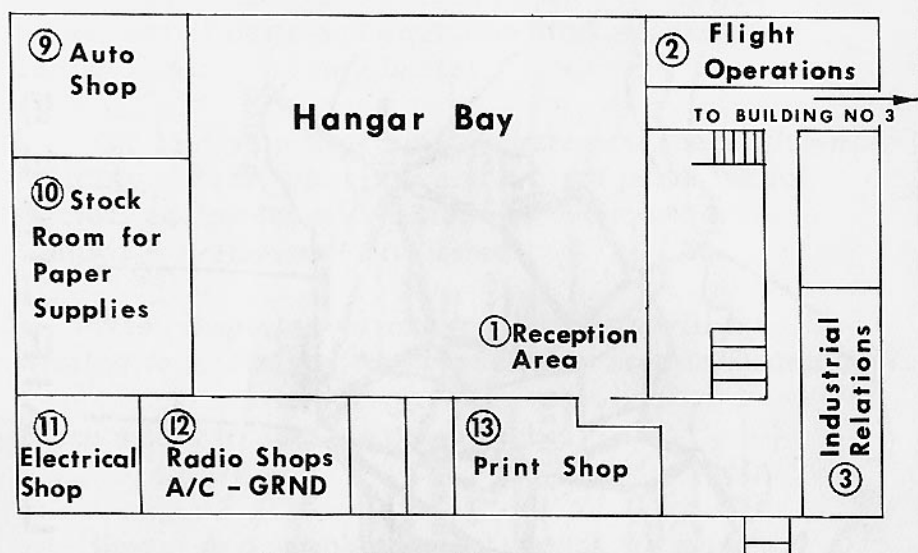

There's lots to see, so come early!

(Because of smoking regulations, we must insist that there be no smoking except in approved areas.)
